Service Water / Feed Water

Service Water / Raw Water Piping

Remote visual inspection may be used exclusively to quickly and accurately diagnose service water lining and piping discontinuities or complement various other NDT methods. Jamko's arsenal of robotic inspection crawlers vary in size and can travel up to 1100 feet. Non-intrusive remote cleaning for suspect areas is also available. Our team of experienced operators deliver professional images, audio & video with time/date and footage data.

Feed Water / Flow Accelerated Corrosion Program

Tiger stripping, scalloping, and other visual data due to flow accelerated corrosion are readily viewed and documented using the latest remote visual inspection technology. Loose part retrievals are also easily performed utilizing Jamko's experienced staff, tooling, and methodology.
